

RFP: Enterprise GIS Platform for Smart City Planning & Urban Analytics

Project Description

Municipal authority seeks an enterprise GIS solution supporting urban growth modeling, land-use planning, transportation analytics, zoning intelligence, and 3D city visualization. The project will integrate IoT sensor feeds, demographic datasets, cadastral layers, transportation networks, and satellite imagery into a centralized geospatial platform supporting planning workflows and executive dashboards.

Budget Range

USD 450,000–850,000

Timeline

Start: Aug 1, 2026 | End: Apr 30, 2027

Technical Requirements

- ArcGIS Enterprise or QGIS Enterprise stack
- 3D city model capability (CityGML preferred)
- PostGIS spatial database
- API integrations (REST, OGC WMS/WFS)
- Real-time IoT ingestion
- Web GIS and mobile access

Required Services

- Data migration
- Spatial database design
- Urban analytics modeling
- Dashboard development
- System integration
- Training and change management

Deliverables

- Enterprise GIS architecture
- Interactive planning dashboards
- Urban growth suitability models
- Data governance documentation
- User training materials

Evaluation Criteria

Technical capability 35%; Similar projects 20%; Staffing/team 15%; Methodology 15%; Cost 15%

Suggested Provider Skills

Urban GIS, Smart City architecture, 3D GIS, PostGIS, ArcGIS Enterprise, spatial analytics, dashboard design
