ABBREVIATIONS

BNSS	Belize National Statistical System — the national network of agencies that produce and share official statistics in Belize.
SIB	Statistical Institute of Belize — the national statistics office responsible for coordinating the BNSS and managing the BNSS Portal.
SDU	Sustainable Development Unit — a unit under the Ministry of Sustainable Development, Climate Change, and Disaster Risk Management in Belize.
UNDP	United Nations Development Programme — the lead UN agency managing this project under the “Enabling of Belize’s Statistical System” initiative.
FAO	Food and Agriculture Organization of the United Nations — supporting data on agriculture and food security.
SEO	Search Engine Optimization

1. BACKGROUND AND CONTEXT

The Belize National Statistical System (BNSS) Portal is the official platform for the dissemination of national statistics produced by the Statistical Institute of Belize (SIB) and contributing agencies across the National Statistical System. The Portal supports multiple national and international frameworks and serves a diverse user base, including policymakers, sector planners, analysts, development partners, researchers, and the general public.

User research conducted as part of the *Enabling of Belize's Statistical System* Project (2024–2027) identified significant gaps in the current BNSS Portal. While the platform successfully fulfills its role as a centralized repository of official statistics, it does not adequately support modern data use practices such as interactive analysis, visualization, geospatial exploration, flexible reporting periods, integrated metadata management, or efficient institutional workflows.

Additionally, the current architecture limits scalability, adaptability, and ease of maintenance. Data submission processes are largely manual, analytics capabilities are minimal, and stakeholders rely heavily on external tools to perform even basic analysis. These limitations reduce the Portal's effectiveness as a decision-support system for national development planning, climate resilience, disaster management, tourism planning, and sectoral monitoring.

To address these challenges, SIB seeks to engage a qualified software development provider to design, develop, and implement a comprehensive enhancement of the BNSS Portal, grounded in user-centered design principles and aligned with international best practices for national statistical platforms.

2. OBJECTIVES OF THE ASSIGNMENT

Overall Objective

To transform the BNSS Portal into a scalable, interoperable, and user centered statistical data platform that supports advanced data discovery, analysis, visualization, reporting, and institutional collaboration for evidence-based decision-making in Belize.

Specific Objectives

- Enhance usability and accessibility for diverse user groups.
- Enable advanced data filtering, aggregation, disaggregation, and visualization.
- Integrate geospatial and thematic dashboards supporting sectoral use cases.
- Include metadata quality, transparency, and trust in official statistics.
- Streamline backend workflows for data submission, validation, and publication.
- Implement a customizable reporting and analytics solution.
- Ensure long-term sustainability, scalability, and technology independence.
- Incorporate a detailed process for data integration, preparation, and distribution.
- Increase the use of the data with a better Search Engine Optimization (SEO).
- Incorporate a Data Dictionary and definitions.

3. SCOPE OF WORK

The Vendor shall be responsible for the end-to-end delivery of the enhanced BNSS Portal, covering documentation, design, development, testing, deployment, training, and handover.

This responsibility shall include, but not be limited to:

- Conducting detailed requirements validation and functional analysis in alignment with stakeholder needs.
- Preparing comprehensive technical and functional documentation, including system architecture, data models, workflow configurations, security framework, and integration specifications.
- Designing user-centered interfaces and dashboards that meet usability, accessibility, and performance standards.
- Developing and configuring all required modules, including data ingestion workflows, validation mechanisms, metadata management, visualization tools, reporting functionalities, and user role management.
- Implementing automated validation rules, audit trails, and notification systems to support data quality and governance.
- Ensuring system scalability, maintainability, and interoperability with existing and future data sources.
- Performing unit testing, system integration testing, user acceptance testing (UAT), and performance testing prior to go-live.
- Deploying the solution in the production environment and ensuring system stability during the transition period.
- Delivering structured training sessions for administrators, data providers, and end users, including the provision of user manuals and training materials.
- Providing a formal handover process, including knowledge transfer sessions, administrative access documentation, and post-deployment support during the agreed stabilization period.
- The Vendor shall ensure that the solution complies with applicable security standards, data protection requirements, and industry best practices, and shall coordinate closely with the Client throughout all project phases to ensure alignment with strategic objectives and timelines.

Specific Work to Be Performed by the Vendor

1. **Architectural design:** Based on the next proposed architecture the vendor must deliver a full architectural document that must include:
 - Software component diagrams
 - Integrations architecture
 - Reporting Architecture

*Technologies are for reference and vendor's can include other technologies if is necessary.

*The transactional database where all the information is kept is an Oracle Database

2. **Data Transformation and flows description:** Based on the proposed flow, each step must be documented and delivered in detail by the vendor, including data transformation, data flows, and reports and dashboards.

*Technologies proposed are for reference.

*Power BI option will be a embedded solution into the portal

4. FUNCTIONAL REQUIREMENTS

Data Discovery, Filtering, and Exploration

The platform shall:

- Support multi-dimensional filtering, where data is available, by:
 - Geographic area (national, district, urban/rural, custom areas)
 - Demographic variables (sex, age group, disability, etc.)
 - Time periods (annual, quarterly, monthly, custom ranges)
 - Framework (e.g. SDG and MTDS indicators with milestone tracking or progress reporting)
- Allow users to identify indicators based on available disaggregation types.
- Ensure that all applied filters are reflected consistently in:
 - On-screen views
 - Downloaded datasets
- Enable grouping, aggregation, and comparison of data within the portal.

Data Visualization and Dashboards

The platform shall:

- Provide interactive charts, trend analyses, and comparative visualizations.
- IS required to include a dashboard where progress on the SDGs and MTDS 2.0 indicators can be monitored against targets to accomplish. This must be editable and easy to maintain.
- Allow filtering directly within graphs and visual components.
- Include configurable dashboards at:
 - National level (priority indicators)
 - Sectoral level (e.g., tourism, energy, climate, housing)
 - Framework (e.g. SDG and MTDS indicators with milestone tracking or progress reporting)
- Enable users to switch between graphical and tabular views.
- Support proper numeric formatting for large values KPI's, having an integrated reporting and analytics capability also enables the definition and monitoring of **Key Performance Indicators (KPIs)**. KPIs represent measurable indicators used to assess progress toward national development priorities, sectoral objectives, and international frameworks such as the **Sustainable Development Goals (SDGs)** and the **Medium-Term Development Strategy (MTDS 2.0)**.

The platform should allow KPIs to be configured, visualized, and monitored through interactive dashboards and reports. This will enable policymakers, analysts, and institutional stakeholders to track progress against defined targets, analyze trends over time, and support evidence-based decision-making.

Having a reporting tool means that, in the near future, new dashboards, KPIs, and reports can be created.

Geospatial and Mapping Capabilities

The platform shall:

- Include interactive GIS-based mapping functionality.
- Support zooming, panning, and geographic selection.
- Enable thematic layers (e.g., climate, pollution, protected areas).
- Link geospatial views to underlying datasets and indicators.
- Support map-based dashboards for sectoral planning and monitoring.

Metadata and Data Quality Management

The platform shall:

- Support comprehensive indicator- level metadata.
- Remove character limitations in metadata fields.
- Include the capability to insert mathematical formulas in the metadata fields.
- The solution must include a metadata configuration, where math expressions can be added.
- Include information on: (If these are structured as information input fields, additional fields can be added in the future by the IT Department with minimal effort.)
 - Data sources
 - Methodologies
 - Estimation vs. measured data
 - Known limitations and restrictions

Backend, Data Submission, and Institutional Workflows

The platform shall:

- Provide role-based access control for NSS partners.
- Allow authorized institutions to:
 - View owned indicators
 - Upload and update data and metadata
 - Track submission and publication status
- Support document and report uploads linked to indicators.
- Enable automated reminders for scheduled data updates.
- Support commenting and notification mechanisms.
- Enable automated validation checks for:
 - Outliers

- Inconsistencies
 - Missing values
- Notify data providers of validation issues prior to publication.

5. REPORTING, ANALYTICS, AND BUSINESS INTELLIGENCE ARCHITECTURE

Reporting and Analytics Requirements

The enhanced BNSS Portal shall include a robust, enterprise-grade reporting and analytics solution that:

- Enables advanced querying across datasets.
- Supports custom report creation without developer intervention.
- Allows users to build tabular and visual reports.
- Supports export in multiple formats (CSV, Excel, PDF).
- Provides usage analytics and system metrics.
- Reporting administration is a secure portal, with credentials, roles, and permissions.
- Reports and visualization are public, as it works today on the portal.

Architectural Flexibility and Technology Neutrality

The vendor must propose a **modular reporting and analytics architecture** comparable in capability to enterprise reporting tools (e.g., SQL Server Reporting Services–type platforms or equivalent BI solutions).

Given that the existing BNSS backend is built on **Oracle**, the proposal must:

- Clearly explain how the reporting solution integrates with Oracle.
- Present alternative technologies where applicable.
- Analyze pros and cons, including:
 - Performance
 - Licensing and operational costs
 - Vendor dependency
 - Scalability and maintainability
- Ensure that the final solution avoids vendor lock-in and supports future evolution.

6. SYSTEM ARCHITECTURE AND NON-FUNCTIONAL REQUIREMENTS

The vendor shall propose a system architecture that ensures:

- Scalability and performance.
- Security and role-based access.
- Interoperability via APIs.
- Compliance with open standards.
- Maintainability and ease of extension.
- Full documentation and knowledge transfer.
- Training that must include documents and videos to use as part of the maintenance.

7. DELIVERABLES

The vendor shall deliver the following outputs. Each deliverable must be submitted in English, in editable formats, and will be subject to formal review and written acceptance by the Statistical Institute of Belize (SIB) and UNDP.

Deliverable 1: Inception Report

Timing: Month 1

Description:

A detailed report outlining the vendor's understanding of the assignment and proposed implementation approach.

Contents shall include:

- Refined scope and assumptions.
- Detailed implementation methodology.
- Proposed system architecture (high-level);
- Proposed reporting and analytics architecture, including technology options and trade-offs.
- Risk assessment and mitigation measures.
- Detailed work plan and timeline.

Format:

- Word (editable)
- PDF (final version)

Acceptance Criteria:

Approval by SIB confirming alignment with TOR requirements.

Deliverable 2: User Experience (UX/UI) Design Package

Timing: Month 2

Description:

A complete UX/UI design package informed by the user research findings.

Contents shall include:

- User personas and user journeys
- Information architecture and navigation structure
- Wireframes for key screens and workflows
- High-fidelity UI mockups for:
 - Home dashboard
 - Indicator pages
 - Data filtering and visualization
 - Geospatial views
- Backend user interfaces

Format:

- Design files (e.g., Figma, Adobe XD, or equivalent)
- PDF exports for review

Acceptance Criteria:

Formal sign-off by SIB and key stakeholders prior to development.

Deliverable 3: Detailed System Architecture and Technical Design

Timing: Month 3

Description:

A comprehensive technical design document detailing the full system architecture.

Contents shall include:

- Logical and physical architecture diagrams
- Frontend, backend, and data layer descriptions
- Integration with existing Oracle-based systems
- Reporting and BI tool selection rationale (including pros and cons)
- API specifications and data exchange mechanisms
- Security, access control, and performance considerations
- Data ingestion process
- Data validation process
- Data Dictionary

Format:

- Word (editable)
- Architecture diagrams (editable formats)

Acceptance Criteria:

Approval by SIB team.

Deliverable 4: Core Platform Enhancements (Frontend & Backend)

Timing: Months 4–6

Description:

Development and configuration of enhanced BNSS Portal functionalities.

Scope includes:

- Advanced data filtering and disaggregation
- Interactive charts and dashboards
- Geospatial mapping functionality
- Enhanced metadata management
- Role-based access and backend workflows
- Document and report upload features

Format:

- Deployed features in a staging environment
- Source code in agreed repository
- Technical documentation

Acceptance Criteria:

Successful system testing and functional validation.

Approval by SIB team.

Deliverable 5: Reporting and Analytics Module

Timing: Months 5–7 (overlapping with Deliverable 4)

Description:

Implementation of a customizable reporting and analytics solution.

Scope includes:

- Report builder to be able to create custom reports of the frameworks and create specific views must be open for all portal users.
- Predefined standard reports
- Data export in CSV, Excel, and PDF formats
- Usage analytics and dashboards
- Integration with Oracle or alternative databases as approved

Format:

- Operational module in staging environment
- Configuration guides and documentation

Acceptance Criteria:

Demonstrated ability for SIB users to create and modify reports without vendor intervention.

Deliverable 6: System Testing and Quality Assurance

Timing: Month 7

Description:

Comprehensive testing of the full BNSS Portal.

Scope includes:

- Functional testing
- Performance testing
- Security testing
- User acceptance testing (UAT) support

Format:

- Test plans and test cases
- Issue and resolution logs
- UAT sign-off documentation

Acceptance Criteria:

Formal UAT approval by SIB.

Deliverable 7: Training and Capacity Building

Timing: Month 8

Description:

Training for system administrators and partners.

Scope includes:

- Administrator training
- Data provider training
- End-user orientation sessions

- Technical training

Format:

- Training materials (slides, manuals)
- Recorded sessions
- Attendance records

Acceptance Criteria:

Completion of all training sessions and delivery of materials.

Deliverable 8: Production Deployment and Handover

Timing: Month 9

Description:

Deployment of the enhanced BNSS Portal to the production environment.

Scope includes:

- Production deployment
- Final system documentation
- Source code handover
- Knowledge transfer to SIB IT team

Format:

- Live production system
- Final documentation package

Acceptance Criteria:

Formal system acceptance and go-live approval.

8. LIST OF REQUIREMENTS AND CODE PREFIXES

Code Prefixes

Prefix	Meaning	What It Covers
OBJ	Objective	Strategic goals of the assignment (what the project aims to achieve).
SOW	Scope of Work	Activities and responsibilities the vendor must perform.
ARCH	Architecture	Architectural design requirements (system structure, integrations, reporting architecture).
FLOW	Data Flow	Data transformation processes and data movement documentation requirements.
FR	Functional Requirement	System capabilities and behaviors (what the system must do).
FR-DISC	Functional – Data Discovery	Data filtering, exploration, grouping, and comparison features.
FR-VIZ	Functional – Visualization	Charts, dashboards, KPI, and visual interaction features.
FR-GEO	Functional – Geospatial	GIS and mapping functionality.
FR-META	Functional – Metadata	Metadata structure, extensibility, and quality management.
FR-BE	Functional – Backend	Institutional workflows, validation, uploads, roles, notifications.
BI	Business Intelligence	Reporting, analytics, reporting architecture, BI integration.
NFR	Non-Functional Requirement	Quality attributes (security, scalability, performance, maintainability, interoperability).
DEL	Deliverable	Contractual outputs to be delivered at defined milestones.

Requirements

Code	Requirement Description
OBJ-01	Transform the BNSS Portal into a scalable, interoperable, user-centered statistical data platform supporting discovery, analysis, visualization, reporting, and institutional collaboration.
OBJ-02	Improve usability and accessibility for diverse user groups.
OBJ-03	Enable advanced data filtering, aggregation, disaggregation, and visualization.
OBJ-04	Integrate geospatial and thematic dashboards for sectoral use cases.
OBJ-05	Strengthen metadata quality, transparency, and trust in official statistics.
OBJ-06	Streamline backend workflows for data submission, validation, and publication.
OBJ-07	Implement a customizable reporting and analytics solution.
OBJ-08	Ensure long-term sustainability, scalability, and technology independence (avoid vendor lock-in).
OBJ-09	Define and implement a detailed data integration, preparation, and distribution process.
OBJ-10	Increase data usage through improved Search Engine Optimization (SEO).
OBJ-11	Incorporate a Data Dictionary and standardized definitions.
SOW-01	Deliver the enhanced portal end-to-end (documentation, design, development, testing, deployment, training, handover).
SOW-02	Conduct detailed requirements validation and functional analysis with stakeholders.
SOW-03	Produce comprehensive technical and functional documentation (architecture, data models, workflows, security, integrations).

SOW-04	Design user-centered interfaces and dashboards aligned with usability, accessibility, and performance standards.
SOW-05	Develop required modules (data ingestion, validation, metadata, visualization, reporting, role management).
SOW-06	Implement automated validation rules, audit trails, and notification mechanisms.
SOW-07	Ensure scalability, maintainability, and interoperability with existing and future systems.
SOW-08	Perform unit testing, system integration testing, UAT, and performance testing.
SOW-09	Deploy to production and ensure stability during transition.
SOW-10	Deliver structured training sessions and provide manuals and materials.
SOW-11	Execute formal handover and knowledge transfer, including administrative documentation and stabilization support.
SOW-12	Ensure compliance with security standards, data protection regulations, and best practices.
ARCH-01	Deliver a complete architectural design document based on the proposed architecture.
ARCH-02	Provide software component diagrams.
ARCH-03	Provide integration architecture documentation.
ARCH-04	Provide reporting architecture documentation.
ARCH-05	Integrate with the existing Oracle transactional database.
FLOW-01	Document detailed data transformation processes and data flows.
FLOW-02	Document reporting and dashboard data flows.

FR-DISC-01	Support multidimensional filtering by geographic area.
FR-DISC-02	Support filtering by demographic variables.
FR-DISC-03	Support filtering by time periods (annual, quarterly, monthly, custom).
FR-DISC-04	Support filtering by frameworks, agencies, and sectors.
FR-DISC-05	Allow identification of indicators by available disaggregation types.
FR-DISC-06	Ensure filter consistency across on-screen views and downloads.
FR-DISC-07	Enable grouping, aggregation, and comparison of data within the portal.
FR-VIZ-01	Provide interactive charts and comparative visualizations.
FR-VIZ-02	Allow filtering directly within visual components.
FR-VIZ-03	Provide configurable national-level dashboards.
FR-VIZ-04	Provide configurable sector-level dashboards.
FR-VIZ-05	Allow switching between graphical and tabular views.
FR-VIZ-06	Ensure proper numeric formatting for large values.
FR-VIZ-07	Support future creation of new dashboards, KPIs, and reports.
FR-GEO-01	Provide interactive GIS-based mapping functionality.
FR-GEO-02	Support zooming, panning, and geographic selection.

FR-GEO-03	Support thematic geospatial layers.
FR-GEO-04	Link geospatial views to datasets and indicators.
FR-GEO-05	Support map-based dashboards for sectoral planning.
FR-META-01	Support comprehensive metadata at indicator levels.
FR-META-02	Remove character limitations in metadata fields.
FR-META-03	Include structured metadata fields (sources, methodologies, measurement type, limitations).
FR-META-04	Allow extensible metadata fields configurable by IT with minimal effort.
FR-META-05	Include mathematical formula field.
FR-BE-01	Implement role-based access control for NSS partners.
FR-BE-02	Allow institutions to view owned indicators.
FR-BE-03	Allow institutions to upload and update data and metadata.
FR-BE-04	Allow tracking of submission and publication status.
FR-BE-05	Enable document and report uploads linked to indicators.
FR-BE-06	Enable automated reminders for scheduled updates.
FR-BE-07	Enable commenting and notification mechanisms.
FR-BE-08	Implement automated validation checks for outliers.

FR-BE-09	Implement automated validation checks for inconsistencies.
FR-BE-10	Implement automated validation checks for missing values.
FR-BE-11	Notify data providers of validation issues before publication.
BI-01	Provide enterprise-grade reporting and analytics functionality.
BI-02	Enable advanced querying across datasets.
BI-03	Allow custom report creation without developer intervention.
BI-04	Support tabular and visual report creation.
BI-05	Support export in CSV, Excel, and PDF formats.
BI-06	Provide usage analytics and system metrics dashboards.
BI-07	Ensure secure reporting administration with credentials and role management.
BI-08	Ensure public access to reports and visualizations as per current model.
BI-09	Provide modular reporting architecture comparable to enterprise BI tools.
BI-10	Clearly define Oracle integration strategy.
BI-11	Analyze alternative technologies (performance, licensing, dependency, scalability).
BI-12	Ensure avoidance of vendor lock-in and support future evolution.
NFR-01	Ensure scalability and performance.

NFR-02	Ensure security and role-based access control.
NFR-03	Ensure interoperability via APIs.
NFR-04	Ensure compliance with open standards.
NFR-05	Ensure maintainability and extensibility.
NFR-06	Provide full documentation and knowledge transfer.
NFR-07	Provide training materials including documents and videos.
DEL-01	Deliver Inception Report (Month 1).
DEL-02	Deliver UX/UI Design Package (Month 2).
DEL-03	Deliver Detailed System Architecture and Technical Design (Month 3).
DEL-04	Deliver Core Platform Enhancements (Months 4–6).
DEL-05	Deliver Reporting and Analytics Module (Months 5–7).
DEL-06	Deliver System Testing and QA documentation (Month 7).
DEL-07	Deliver Training and Capacity Building (Month 8).
DEL-08	Deliver Production Deployment and Handover (Month 9).

9. PROPOSED WORK PLAN AND TIMELINE

Month	Key Activities	Deliverables
Month 1	Project initiation, stakeholder alignment	Inception Report
Month 2	UX research validation and design	UX/UI Design Package
Month 3	Technical architecture and Tools selection	System Architecture Design
Month 4	Core development (Phase 1)	Platform Enhancements
Month 5	Core development (Phase 2), Tool setup and migration of current reports with improvements	Platform + Reporting
Month 6	Advanced features, GIS, dashboards	Platform Enhancements
Month 7	Testing and UAT	QA & UAT Sign-off
Month 8	Training and capacity building	Training Completion
Month 9	Production deployment and handover	Go-live

10. PAYMENT MILESTONES

Payments may be tied to acceptance of deliverables as follows:

- 10% – Inception Report
- 15% – UX/UI Design Approval
- 15% – Architecture Design Approval
- 30% – Development Completion
- 15% – UAT Acceptance
- 15% – Production Go-live

11. VENDOR QUALIFICATIONS AND EXPERIENCE

Institutional Experience

The vendor **must** demonstrate:

- **At least ten (10) years of proven experience** in the design, development, and implementation of complex data platforms, statistical systems, or information management systems.
- **At least three (3) years of experience** delivering data portals, dashboards, or business intelligence solutions for public sector, government, or international development institutions.

Technical Expertise

The vendor must demonstrate documented expertise in the following areas:

- **Data Platform Architecture:**
Proven experience designing modular, scalable, and secure system architectures for data-intensive platforms.
- **Business Intelligence and Reporting Systems:**
Demonstrated experience implementing customizable reporting solutions comparable to enterprise-grade tools (e.g., SQL Server Reporting Services–type platforms or equivalent BI/reporting tools).

Experience must include:

- **Custom report creation**
- **User-defined queries**
- **Multi-format exports (CSV, Excel, PDF)**
- **Database Technologies:**
Proven experience integrating or working with enterprise databases, including Oracle.
Experience with heterogeneous environments (Oracle combined with other BI or analytics technologies) is considered an asset.
- **Data Visualization and GIS:**
At least two (2) projects involving interactive dashboards and/or geospatial data visualization (GIS).
- **UX/UI for Data-Heavy Systems:**
Demonstrated experience applying user-centered design principles to statistical or analytical platforms.

Methodological and Operational Capacity

The vendor must demonstrate:

- A clear and structured implementation methodology (Agile).
- Proven experience conducting knowledge transfer and capacity building.
- Ability to deliver detailed technical documentation and training materials.
- Experience working under international donor-funded projects is an asset.

References

The vendor must provide **at least three (3) professional references** from recent clients for similar projects, including contact details.

12. EVALUATION CRITERIA AND SCORING MATRIX

Criteria	Description	Scores	Weight (%)	
Required Experiences				
	Ten years of experience in data platforms/systems development	Pass/Fail		
	Three years of experience in data portal/dashboards/business intelligence solutions	Pass/Fail		
Technical Proposal – sub-criteria				
	Technical Approach & Architecture	Depth, scalability, interoperability	30	70%
	Reporting & BI Solution	Flexibility, Oracle integration, sustainability	20	
	Functional Coverage	Alignment with functional requirements	20	
	UX/UI & User-Centered Design	Usability and accessibility	15	
	Team Expertise	Skills and relevant experience	10	
	Project Management & Risk	Methodology and risk mitigation	5	
	Sum Technical Scores		100	
Financial Proposal		Cost-effectiveness		30%
Total				100%

Only the vendors whose Technical Proposal receives a score of seventy (70) or higher will be considered for the award of contract.

13. APPROVAL

This TOR is approved by:

Signature:

Name and Designation: Chad Bowman, Officer-in-Charge

Date of Signing: 1 April 2026

ANNEX 1: LIST OF AGENCIES THAT INTERACT WITH THE PORTAL

The following list outlines the agencies and institutions that actively interact with and use the Portal. These stakeholders play a key role in providing data, validating information, and consuming statistical outputs to support planning, monitoring, reporting, and decision-making processes. Their interaction with the Portal ensures the relevance, accuracy, and timeliness of the information made available to the public and to national stakeholders.

No.	Agency	ACRONYMS
1	Belize Crime Observatory	BCO
2	Belize Solid Waste Management Authority	BSWMA
3	Central Bank of Belize	CBB
4	Department of Border Management & Immigration Services	DBMIS
5	Department of Environment	DOE
6	Department of Transport	DOT
7	Elections and Boundaries Department	EBD
8	Energy Unit	Energy Unit
9	Forest Department	FD
10	Ministry of Agriculture (MoA)	MOA
11	Ministry of Education	MOE
12	Ministry of Health and Wellness	MOHW
13	Ministry of Human Development	MHD
14	National Climate Change Office	NCCO
15	National Emergency Management Organization	NEMO
16	National Hydrological Systems	NHS
17	National Women's Commission	NWC
18	Social Security Belize	SSB

19	Belize Tourism Board	BTB
20	Sustainable Development Unit	SDU
21	Belize Tax Department	BTS
